

*ABSTRACT OF THE DISCLOSURE*

An apparatus for opening and/or closing a dryer door wherein the door is opened and/or closed more simply and swiftly. The present invention includes a hook provided at one side of the dryer door wherein a hanging portion is formed at both sides of one end of the hook. A latch body is provided to one side of a front panel having the door installed thereon, and the hanging portion is inserted in an insertion hole formed in the latch body. A pair of holders is provided to confront each other in the latch body to hold the hanging portion, and a pair of springs is provided in the rear of the holders, respectively.
